

## REMOTE WORK

### IoT-Solutions & Remote Services for Remote Work in medium-sized Businesses

Today, medium-sized companies across all industries are still mostly dependent on direct work processes in their own building infrastructure and direct physical contact between employees and with customers, suppliers and partners. Solutions for remote work have simply not yet been established!

How existentially dangerous missing solutions for remote work are, is shown by crisis situations like the coronavirus pandemic. This results in significant communication gaps and supply bottlenecks.

If Remote Work is integrated in an individually tailored way, you are largely able to control your business processes remotely.

Thanks to the IoT and automation technologies available today, remote work is no longer limited to classic office work (such as finance, administration or sales) and IT administration.

So don't wait any longer, create the conditions for remote work, comprehensive digital collaboration, remote monitoring and remote management in your company now.

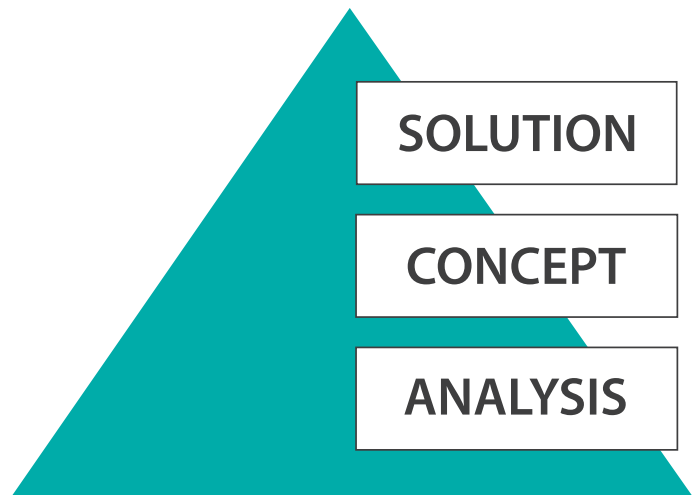

# THE ICS REMOTE WORK QUICK-CHECK ANALYSIS

Remote work can take place from any location. In general, the basic prerequisite is that online access is available, appropriate bandwidths for data handling are provided and, as a rule, access to the company network including the associated security standards is guaranteed. Further requirements are always individual and are defined by your business, your locations and your functional areas.

As a leading supply chain specialist for digital collaboration and remote management, ICS will be happy to analyze your current situation in a **Remote Work Quick-Check analysis that is completely free of charge**. This takes place either online with our experts in a web session or, by agreement, at your site. After this appointment you will receive a basic solution recommendation from ICS. If you are convinced by our methodology and competence, we will plan the next steps with you if desired, develop a solution concept and transform your processes for remote work where you need it.
